# KURRALEA ULTRAWHITE STUD

Founded in 2020, Kurralea UltraWhite stud initially purchased UltraWhite ewes & a ram from Hillcroft Farms in WA. We saw the demand for shedding sheep was increasing within some of our client areas, and after researching various shedding breeds we believe the UltraWhite is the superior of the shedding sheep breeds.

We love the whole package the UltraWhite offers – Size, growth rates, structurally correct, good on feet, shedding ability, temperament & backed by LambPlan performance testing.

In 2021, we purchased additional ewes and the ram Hillcroft Farms 7128-20 for \$11,000 at the Hillcroft sale.

We believe 7128-20 is an outstanding sire – he is structurally very correct, with high growth rate and excellent shedding. His first progeny will be offered at this year's October sale.

Kurralea Studs is one of the thirteen foundations studs of the UltraWhite Sheep Breeders Association of Australia Inc.

## HIGHLIGHTS/TRAITS OF ULTRAWHITE BREED

- High performance with mandatory performance testing (LAMBPLAN)
- Good shedding ability
- Good fertility
- Good milking and mothering instinct
- Low/moderate birth weights
- Good growth
- Great muscling
- High yielding carcass across medium-heavy weight carcasses with the right amount fat
- Ability to maintain exceptional do ability and hardiness,
- Sound Structure
- Easy care

## OUR BREEDING OBJECTIVES

**We focus on breeding UltraWhite sheep that fit into the characteristics that Kurralea sheep are renown for:**

- Structural excellence
- High growth rates
- High performance with full recording for LambPlan
- Excellent carcass quality and meat yield
- Excellent wool shedding ability
- Ability to perform under varied conditions.
- Low maintenance

## BREED HISTORY

The UltraWhite is a wool shedding, meat producing sheep. Development of the UltraWhite breed started in 2005, when Dawson Bradford Snr, from Hillcroft Farms Poll Dorset Stud, WA, saw an opportunity to breed a high performance, fast growing, low maintenance, wool shedding sheep called the "easy care".

As a prime lamb producer of Poll Dorset sheep for over 50 years, Dawson was ideally placed to recognise the qualities required in a meat producing sheep and set out to breed a sheep capable of performing well across a wide and diverse range of climate and conditions.

He started the process in 2005 with the mating of a selection of Poll Dorset ewes from the stud flock to top White Dorper rams to breed a wool shedding composite sheep that was easy-care, hardy and a good do-er.

It had to be hardy and yet able to perform at the highest level for growth when conditions were right for peak production.

The high milking ability of the Dorset and the strong maternal instinct of both breeds needed to be preserved, along with the ability to breed year-round was a non-negotiable trait for the new breed.

Sufficient fat in the ewes for good maternal function and survival in harsher conditions was most necessary. Good muscling, lean meat yield and eating quality were also traits that were to be a prerequisite of the new breed.

The new breed stabilized very quickly unsurprisingly due to only two breeds being involved, the Dorset and the Dorper. The new breed suiting a wide area of Australia from the wetter areas of Southern Australia to the drier areas of more northern and inland parts.

In 2014 the new breed was named "UltraWhite" the easy-care sheep, one that meets the criteria set out by Dawson Snr in 2005 to meet his needs and the industry's as well.

The Australian UltraWhite Association Inc. was established in Western Australia in September 2017, and at the Inaugural meeting of UltraWhite breeders in September, 2020 the Association name was changed to UltraWhite Sheep Breeders Association of Australia Inc.
